Claim
... A cost effective, scalable system for serving dynamically constructed
  Web pages,
  comprising:
  a) a Web **server** layer comprising one or more processors;
  b) an application **server** layer comprising one or more processors,
  wherein each
   processor executes one or more application servers; and
  c) A database **server** layer comprising one or more processors and a data
  store
  including content for use in dynamically constructing Web pages;
  wherein a **processor** of the Web **server** layer is programmed to perform
  the
  following:
  i) receive an end user request;
  ii) determine...

...process data as required to respond to the end user
  request;
  iii) select an application **server** that processes data in the determined
  way; iv) request processed data from the selected application **server**
  running on a
  selected **processor** of the application **server** layer;
  V) receive the requested processed data from the determined application
   server running on the selected application **server** layer **processor** ;
  vi) construct a Web page containing the received processed data; and
  vii) serve the constructed Web page; and
  wherein a **processor** of the application **server** layer is programmed to
  perform the
  following:
  i) receive a request for processed data from a selected **processor** of
  the
  Web **server** layer directed to a selected application **server** ;
  ii) request data required to fulfill the received request from a database

server running on a selected **processor** of the database **server**
layer;
iii) receive the required data from the database **server** running on the
selected database **server** layer **processor** ;
iv) process the received, required data using the selected application
server
into the requested processed data; and
V) **forward** the requested processed data to the selected Web **server**
layer
 processor ; and
wherein a **processor** of the database **server** layer is programmed to
perform the
following:
i) receive a request for data from a selected **processor** of the
application
 server layer;
ii) retrieve the request data from the data store; and
iii) **forward** the requested data to the selected **processor** of the
application **server** .

...TEXT: to the Web server's home directory, only to subdirectories, or to
both.

The Information **Server** includes File **Transfer** Protocol (FTP) and
Gopher, too. These servers use the same tabular-styles properties sheets
for customizing your Internet services. The FTP **server** is quite a step up
from the one included with NT. You can specify virtual directories that
look like subdirectories of your home (that is, **Home** **page**) directory,
but these really reside in **different** directory trees across the **server**
drive or even your network.

You can access these virtual directories, set up as publishing directories

Word Count: 1871

...   it reads the magnetic stripe on the consumer's card and encrypts
the consumer's **personal** identification number in the same way the
automated teller machine does-using the "DES" encryption...a PIN pad, which
encrypts the consumer's PIN before it ever passes into his **computer** ,
notes Gay. The data entry and encryption must occur in a single secure
device so button. I click on it. We now take over the transaction and **send**
 a message down to the PIN pad to turn it on. The consumer chooses either
...

...software puts two more layers of encryption around all the payment
transaction data" and then **sends** it to the secure SafeTPay **server** at a
bank **processor** , without passing it through the merchant's **Website** .
Passing the consumer's private details direct to the bank/ **processor**
ensures that account information won't be stolen from less secure merchant
Web site's, as has been happening with credit card transactions. "When the
processor looks at the transaction with all the card data on it, it looks
like it came from a brick and mortar store," Gay says. "The **processor**
says 'This is an ATM transaction,' they go out their back door to the ATM
networks for approval, then hand it to us and we **send** the merchant a
transaction number and approval **code** , plus an email." "And we **send** the
consumer an email, saying 'you've just bought from XYZ', all of which takes
seconds." SafeTPay will receive revenue in the form of "a small fee" from
the **processor** -which could range from a couple of cents to a dime,
depending on volume, according to use the purchasing history of the
consumers using the machines to **send** them targeted advertisements, income
from which the company hopes will eventually equal that of fees...

...Another payment method that's a prospective alternative to credit cards is a floppy disk **drive** device being developed by UTM. Its UTM Machine-a modified disk that serves as a...keypad on which consumers may enter their PINs and a microprocessor chip that can encrypt **personal** data. When purchasing online the consumer slides his ATM card into the UTM device, keys...

...a PIN on the mini-keypad, and then inserts the disk into the floppy disk **drive** of the PC. The transaction occurs over the ATM network, with the funds coming out...Hughes, research director at the Yankee Group, Boston, "What UTM Systems is doing is very **forward** looking," but he adds, "We haven't yet seen a demand for these products." He...that," she says. An upcoming test will involve a consumer using a UTM at his **computer** and accessing a merchant Web site. "We will 'verify' that from the consumer all the...

...device." In general, STAR, working with NACHA, is "looking at how the EFT (electronic funds **transfer**) networks would support online debits over the Internet," ...high, but it's not the first to propose using a modified disk as a. **computer** reader. SmartDisk Corp., Naples, FL, suggested as much in early 1997. Although that was for...

May 10--QUESTION: I am having trouble with the new **home   page** I am
uploading. When I use Netscape to view the page it looks fine. Then...

...eight browsers being used to look at your Web site!
HyperText Markup Language (HTML), the **programming   language** used to
create web pages, was supposed to be a unified language that allows you to
communicate with users no matter what kind of **computer** or device they
were using to connect to the Internet. Unfortunately, software programmers
all believe...

...countless design techniques that will contribute to seeing a Web page
differently when viewed with **different** browsers, but the improper use of
tables and frames are among the most common cause of "distortion."
Tables, fonts, style sheets and many other **items** are resolved in
different ways by the two main browsers, so if you use a built-in utility
such...

...on Source or Page Source. This should bring up a window with the actual
HTML **code** that is used to create that page.
Web sites like www.Webpagesthatsuck.com are dedicated...

...A handy utility called BrowserMaster allows you to see how your page
will appear at **different** resolutions in the **different** browsers without
having to make changes to your own system. A shareware version can be...

...compiled by the staff of Computing and Ken Colburn, host of the weekly
radio show **Computer** Corner, heard Saturdays 3-5 p.m. on News Radio 620
KTAR. Look up Ken's previous questions and answers at www.support4free.com.
 Send questions to computing@pni.com. **Personal** answers usually are not
possible.

...TEXT: to mind was a Web page. Whether it was Yahoo, bianca's Smut
Shack, my **home   page** or any other site, you almost certainly pictured it
in a standard Web browser -- Microsoft Internet Explorer or Netscape
Navigator -- on a **personal** - **computer** video display.
A year or two from now, you may well have a **different** perception. The
one-size-fits-all Web, if it ever really existed, is going away...

...book and to-do list. My MIDI music workstation is nothing more than a
specialized **computer** with a piano-like keyboard.
Now we're connecting various devices to the mother of...

...have access to faster speeds, I suspect, will it be worth many
companies' time and **money** to create such advanced sites. Smart companies
are working on it right now.
On another...

...from this end of the market, and on a wireless device, you're in a
different universe than a normal PC using a typical modem, much less a
high-speed cable...

...sorts of things.
But connect a wireless phone to the Internet and you have a **different**
matter. The Web sites I routinely use at work, even the ones that are
mostly...

...a problem than it seems. We'll typically be using these devices to

retrieve and **send** highly refined information, such as phone numbers,
street addresses, driving directions, plane schedules, stock quotes...

...This is pure text, for the most part, and text takes almost no time to
transmit compared with graphical information or audio files, much less
videos. (A coming generation of wireless...

...be useful in as many ways as possible. But re-writing the Web-browser
display **code** for each **different** device, much less **different** versions
of today's PC browsers, is beyond daunting.
What can they do? Create one...the intersection of human and machine. The
layout of the screen and keyboard, on a **computer** or wireless phone, fits
into this category.
Why are so many user interfaces so awful...

OPINION: Designing A Home Page Is Easy, But Know HTML to Look Like A Pro
Deborah Kong
San Jose (Calif.) Mercury News
April 11, 1999
DOCUMENT TYPE: NEWSPAPER   RECORD TYPE: FULLTEXT   LANGUAGE: ENGLISH
WORD COUNT: 1348

...TEXT: in awhile.
When I was given the assignment of using one of the many free **home - page**
building services on the World Wide Web, my reaction was a mixture of
curiosity, disdain...

...their lifetime at night.
Brian also had several interactive features: places to post a joke, **send**
a postcard to a friend or subscribe to a free weekly joke e-mail.
Impressive...

...m Bored as hell. So to take up some time I decided to build this **home
page** ."
On that inspirational note, I began scouting out various Internet starting
points to see what...

...free Web page building services they offered. Many required me to
register, which meant giving **personal** information such as birthdate and
ages of children, or wading **through** product offers.
At Tripod, there were two levels of the service: easy step-by-step...

...Netscape (www.netscape.com) since its Web site builder was targeted at
small businesses.
The **personal** publisher at America Online (www.aol.com) looked promising,
but the Lycos Free **Homepage** Builder (www.lycos.com???) was the most
enticing, boasting a fun, free service. Most important...

...dug through some papers and found a friend's poem. Hey, if you can't
come up with your own content, raid your friends' intellectual property --
with their permission, of course...

...p.m.
After dinner, I reconsidered the Web page, and its extensive address at

http:// **homepages** .lycos.com/dkong2/lypersonal/dkong.html, with some
dismay.
It had been easy and quick...
...still looked unwieldy.
At the top of the page was an unremarkable graphic of a **computer** , the
default image. Hoping to replace it with a photo, I went to Kinko's...

...11-step process. This took me 11 minutes, and at 40 cents a minute for
computer use, the bill came to $4.40.
Installing the picture **of** myself, my mom and sisters on the page was no
problem; I just found the...

...the page. I chose a lime green and turquoise combination. The page's
address (http:// **homepages** .infoseek.com/debkong/index.html) was slightly
shorter and I chose to add a visitor...http://xoom.com). At Angelfire
(www.angelfire.com), another part of Lycos, there is HTML **code** for sound
files for inserting into Web pages.
But it was the **tips** section of GeoCities (www.geocities.com) that put it
all into perspective. Where had my...
